1. Executive Summary & Health Score

48 / 100

Below average - Significant optimization opportunities available

Score Breakdown

Content Quality (23%)		45/100
Technical SEO (22%)		55/100
On-Page SEO (20%)		50/100
Schema / Structured Data (10%)		60/100
Performance / CWV (10%)		45/100
AI Search Readiness (10%)		25/100
Images (5%)		50/100

Key Findings Overview

Meubelen Moens is a well-established Belgian furniture retailer founded in 1948 with a strong physical presence in Londerzeel. The website runs on WordPress/WooCommerce with WPML for bilingual support (NL/FR). While the technical foundation is solid, the site significantly underperforms in content depth, AI search readiness, and local SEO optimization. The 1948 heritage and physical showroom are powerful competitive advantages that remain largely unexploited in the digital presence.

Critical issues identified: 8

High priority issues: 12

Medium priority issues: 15

Low priority issues: 10

Top 5 Quick Wins (Highest Impact, Lowest Effort)

1. Add FurnitureStore schema

Low effort, high local SEO impact - enables Local Pack visibility

2. Fix homepage title/H1

Currently "Meubelen Moens - Meubelen Moens" - 5-minute fix with major CTR impact

3. Allow AI crawlers

Unblock GPTBot + Google-Extended in robots.txt for AI search visibility

4. Add Sitemap to robots.txt

One-line addition improves crawl discovery

5. Fix French meta description

French homepage still shows Dutch meta description - translation oversight

2. Technical SEO Analysis

Technical SEO Score

55/100

2.1 Crawlability

robots.txt Analysis

The robots.txt file is present and includes Cloudflare-managed content signals with EU Directive 2019/790 compliance. It explicitly blocks multiple AI crawlers and contains filter URL disallow rules.

CRITICAL All major AI crawlers blocked

robots.txt disallows: GPTBot, ClaudeBot, Google-Extended, CCBot, Bytespider, Amazonbot, Applebot-Extended, meta-externalagent. Cloudflare signals set ai-train=no. The site is effectively invisible to AI-powered search (Google AI Overviews, ChatGPT, Perplexity). Recommendation: Selectively allow GPTBot and Google-Extended to enable AI search visibility while maintaining ai-train=no for training.

HIGH No Sitemap declaration in robots.txt

The sitemap index exists at /sitemap.xml (48 child sitemaps, Rank Math) but is not referenced in robots.txt. Add: Sitemap: <https://www.moensmeubelen.be/sitemap.xml>

MEDIUM Filter URLs partially blocked

robots.txt blocks diepte-, afmeting-, kleur-, materiaal-, merk- filter paths. However, other filter combinations and sort parameters may still be crawlable, potentially wasting crawl budget on duplicate content.

2.2 Indexability

HIGH Hreflang implementation needs verification

Product pages show proper hreflang (nl <-> fr). WPML manages this, but the French homepage has its HTML lang attribute set to fr-BE while serving Dutch meta descriptions, suggesting incomplete WPML configuration.

MEDIUM Location pages potentially outdated

Page sitemaps reveal location pages for Wemmel, Zaventem, Willebroek, Grimbergen, Bornem, Strombeek, Vilvoorde, Asse, Dendermonde, Brussel - last updated February 2022. These need content freshness review.

2.3 Security & Headers

GOOD HTTPS enforced

Site uses HTTPS throughout. Cloudflare CDN provides SSL termination.

GOOD GDPR-compliant cookie consent

Iubenda cookie banner with proper consent categories (analytics, marketing, functional), accept/reject buttons, and explicit withdrawal option. Google Consent Mode v2 enabled.

MEDIUM Security headers need verification

Verify Strict-Transport-Security, X-Content-Type-Options, Content-Security-Policy, and Referrer-Policy headers are properly configured on the server/Cloudflare level.

2.4 CMS & Technology Stack

Platform: WordPress + WooCommerce

Theme: Woodmart (popular WooCommerce theme)

Multilingual: WPML plugin (NL/FR)

SEO Plugin: Rank Math

Forms: Fluent Forms

Accessibility: OneTap Pro plugin

CDN: Cloudflare

Cookie Consent: Iubenda

2.5 Third-Party Scripts

HIGH Heavy third-party script load (8+ external services)

Detected: Google Tag Manager (2 containers: GTM-KXPW2B76, GTM-3VXP), Google Analytics (G-7KW2KTWNCT), Brevo/Sendinblue, ThoughtMetric pixel, Metricool analytics, Site Behaviour tracking, OneTap accessibility. Each adds main-thread JavaScript overhead affecting INP (Interaction to Next Paint). Consider consolidating the 2 GTM containers and deferring non-critical scripts until after user interaction.

2.6 URL Structure

MEDIUM URL structure inconsistency between languages

Dutch products: /product/revor36/ vs French: /fr/produit/revor36-fr_be/. The -fr_be suffix is unnecessary clutter from WPML defaults. Also: Dutch uses /product/ while French uses /produit/ - acceptable for SEO but adds translation complexity.

LOW Non-descriptive blog slugs found

URLs /25240-2/ and /25267-2/ in the blog sitemap use numeric-only slugs providing zero keyword signals. These should be redirected to descriptive URLs.

2.7 IndexNow Protocol

LOW No IndexNow implementation

For a frequently updated product catalog (619+ products), IndexNow would speed up Bing/Yandex indexing. Rank Math supports IndexNow natively - enable it in plugin settings.

3. Content Quality & E-E-A-T Analysis

Content Quality Score

45/100

3.1 E-E-A-T Assessment

Factor	Weight	Score	Assessment
Experience	20%	5.0/10	Physical showroom = strong signal, underexploited
Expertise	25%	4.0/10	Manufacturer descriptions, no expert editorial voi
Authority	25%	3.5/10	Limited external citations and backlink authority
Trust	30%	5.5/10	Address, BTW number, 1948 heritage visible

3.2 Content Depth Issues

CRITICAL Product descriptions are thin (~85 words average)

Sampled product page (Revor36 Soft Feather dekbed, EUR 605) contains only ~85 words of descriptive content. For furniture products at this price point, 300-400+ words are expected, covering materials, dimensions, care instructions, and styling advice. This affects rankings for long-tail product queries.

CRITICAL Blog posts are very thin (~180-200 words)

The most recent blog post "Ontdek de modulaire sofas van XOOON" contains only 180-200 words of body content. This is promotional content, not informational. Target 1,500+ words for blog posts to demonstrate expertise. The blog has ~43 total posts spanning 2018-2026 with inconsistent publishing cadence.

HIGH Blog images use GIF format with poor alt text

Blog post images are served as GIF format (1600x830px) with identical, generic alt text across all images in a post. Alt text "Ontdek De Modulaire Sofas Van Xooon" is repeated for all 4 images instead of describing each specific sofa model (MERANO, TINEO, CERVO).

HIGH No author bylines on blog posts

Blog listing page shows no author information. Schema references "Donovan" as author but this is not visible to users. Adding author name, photo, bio, and expertise credentials (e.g., interior design background) significantly strengthens E-E-A-T signals.

HIGH No customer reviews on product pages

Sampled product pages have no review section, no star ratings, no customer testimonials. Reviews are a critical trust signal for furniture purchases (high-value, considered purchases).

3.3 Content Opportunities

MEDIUM 1948 heritage story unexploited

Contact page briefly mentions founding in 1948 by Louis Moens (originally sculptor/carpenter). This compelling heritage narrative deserves a dedicated "Over Ons" (About Us) page of 600+ words covering company history, showroom experience, and team expertise. No /over-ons/ page was found (returns 404).

MEDIUM No buying guides or editorial content on category pages

Category pages likely contain minimal text beyond product listings. Adding 300-500 word buying guides per category (e.g., "Hoe kies je de perfecte zetel?") would significantly improve rankings for category-level queries.

4. On-Page SEO

On-Page SEO Score

50/100

4.1 Title Tags

CRITICAL Homepage title is duplicated: "Meubelen Moens - Meubelen Moens"

The brand name is repeated, wasting valuable title tag space. Recommended: "Meubelen Moens | Meubelwinkel Londerzeel - Zetels, Bedden & Kasten". Product pages have better titles (e.g., "Soft Feather 90/10 Dekbed - Meubelen Moens").

4.2 Meta Descriptions

CRITICAL French homepage serves Dutch meta description

The /fr/ homepage has HTML lang="fr-BE" but the meta description is entirely in Dutch: "Meubelen Moens - Ruim aanbod Meubelen Moens: verschillende modellen, stijlen en kleuren aanwezig..." This is a WPML translation oversight that affects CTR for French-speaking users in Google results.

HIGH Homepage meta description repeats brand name 3 times

"Meubelen Moens - Ruim aanbod Meubelen Moens: verschillende modellen... Bekijk meteen ons Meubelen Moens gamma..." The description should focus on unique value proposition, product range, and the physical showroom experience.

4.3 Heading Hierarchy

HIGH H1 tag issues on homepage

Homepage H1 is "Meubelen Moens - Meubelen Moens" - same duplication as title tag. Blog post H1 is repeated as H2 ("Ontdek de modulaire sofas van XOOON" appears as both H1 and H2). Each page should have exactly one unique, keyword-rich H1.

4.4 Internal Linking

GOOD Extensive internal linking structure

Pages have 85-100+ internal links via navigation menus, category links, related products, and breadcrumbs. The deep category hierarchy (127 product categories) creates good topical clustering.

MEDIUM Blog posts lack product/category cross-links

Blog content covers relevant topics (modular sofas, dining sets, mattresses) but direct links to product and category pages within the content body are minimal. This misses an opportunity to distribute topical authority from informational to commercial pages.

4.5 Image Alt Text

HIGH Alt text is templated and non-descriptive

Product images use "Afbeelding 1", "Afbeelding 2" pattern. Blog images repeat the post title for all images. Descriptive alt text like "Soft Feather 90/10 donsdekbed - wit - 240x220cm" improves image search visibility and accessibility.

5. Schema / Structured Data

Schema Score

60/100

5.1 Existing Schema (Working)

Schema Type	Location	Status
Organization	Site-wide	Present - needs enhancement
WebSite	Homepage	Present with SearchAction
Product + Offer	Product pages	Present (name, price, SKU, brand)
BreadcrumbList	Inner pages	Present and properly structured
Article/BlogPosting	Blog posts	Present with author reference
WebPage	Key pages	Present with dates
ImageObject	Product/blog pages	Present
VideoObject	Some blog posts	Present (MP4 format)

5.2 Missing Schema (Critical Gaps)

CRITICAL No LocalBusiness/FurnitureStore schema

Despite having a physical showroom with address, phone, and opening hours, there is no LocalBusiness schema. FurnitureStore is the correct subtype. This directly impacts Local Pack visibility, Google Maps presence, and Knowledge Panel enrichment. See Appendix for ready-to-use JSON-LD template.

HIGH Product schema missing AggregateRating

Product pages have price and availability but no review ratings in schema. This means no star ratings in Google SERPs, which typically increases CTR by 20-40%.

HIGH Product schema missing shipping/return details

OfferShippingDetails and hasMerchantReturnPolicy are missing from Product offers. These enable shipping cost and return info display in Google Shopping results.

MEDIUM Organization schema incomplete

Missing: contactPoint (customer service), foundingDate (1948), sameAs (social profiles), numberOfEmployees. These enrich the Knowledge Panel and strengthen entity signals.

6. Sitemap Analysis

6.1 Sitemap Structure

Sitemap index at /sitemap.xml contains 48 child sitemaps generated by Rank Math SEO Plugin. The site has a substantial product catalog with bilingual support.

Sitemap Type	Files	Est. URLs	Last Updated
Product	40	~2,800+	Mar 27, 2026
Pages	2	~833	Oct 26, 2025
Blog Posts	1	43	Mar 8, 2026
Categories	1	1	Mar 2, 2026
Product Categories	1	127	Mar 2026
Local/KML	1	1	May 25, 2025

6.2 Sitemap Findings

HIGH Sitemap not declared in robots.txt

Add "Sitemap: https://www.moensmeubelen.be/sitemap.xml" to robots.txt for improved crawl discovery.

HIGH Product sitemap numbering gaps

Product sitemaps are numbered 1-45 but only 40 files exist. Missing sitemaps may still be cached by search engines, returning 404 errors during crawling.

MEDIUM Local sitemap only references KML file

The local-sitemap.xml contains only /locations.kml rather than actual location page URLs. Location pages should be included directly in the sitemap for proper indexing.

MEDIUM Blog sitemap mixes NL and FR URLs

Dutch and French blog posts share one sitemap file. Consider separating into language-specific sitemaps or adding hreflang annotations within the sitemap.

LOW Non-descriptive URL slugs in blog sitemap

/25240-2/ and /25267-2/ use numeric slugs. Redirect these to descriptive URLs with proper 301 redirects.

7. AI Search Readiness (GEO)

AI Search Readiness Score

25/100

Generative Engine Optimization (GEO) measures how well content is positioned for AI-powered search experiences including Google AI Overviews, ChatGPT web search, Perplexity, and Bing Copilot.

CRITICAL All AI crawlers blocked in robots.txt

GPTBot (OpenAI/ChatGPT), ClaudeBot (Anthropic), Google-Extended (Gemini/AI Overviews), CCBot (Common Crawl), Bytespider (TikTok), Amazonbot, Applebot-Extended, and meta-externalagent are all disallowed. Combined with Cloudflare ai-train=no signal, the site is nearly invisible to all AI search platforms. This is the single highest-impact issue for future search visibility.

CRITICAL No /llms.txt file

The /llms.txt file (returns 404) is an emerging standard for providing structured business information to LLMs. Creating this file with business description, product categories, showroom details, and key facts would help AI systems accurately represent Meubelen Moens in generated answers.

HIGH Content not structured for AI extraction

Product descriptions lack clear, factual statements that AI systems extract for citations. Adding definitive statements like "Meubelen Moens biedt meer dan 500 meubelen in een toonzaal van 2000m2 in Londerzeel" would improve passage-level citability.

HIGH No FAQ sections on key pages

Question-answer format is the most extractable content structure for AI search. Adding FAQ sections to category pages (e.g., "Wat is de levertijd?" "Kan ik de zetel uitproberen?") would significantly improve AI citation potential.

MEDIUM Weak brand authority signals for AI

No dedicated About page, limited press mentions, no industry affiliations visible. AI systems use these signals to assess source authority when generating answers about furniture retailers.

8. Local SEO

Local SEO Score

38/100

8.1 NAP Consistency

CRITICAL Business name inconsistency: "Meubelen Moens" vs "Moens Meubelen"

The domain "moensmeubelen.be" implies "Moens Meubelen" but the business displays as "Meubelen Moens." Google may treat these as different entities. Standardize to ONE canonical name across GBP, website, schema, and all citations. Current on-site NAP is consistent as "Meubelen Moens."

GOOD Address and phone consistent on-site

Mechelsestraat 183-191, 1840 Londerzeel and +32 (0)52 30 28 98 appear consistently across the site. BTW number BE0413640662 adds entity verification.

8.2 Local Schema

CRITICAL No FurnitureStore schema markup

This is the #1 local SEO fix. FurnitureStore is the correct Schema.org subtype for this business. Include: name, address (PostalAddress), geo (GeoCoordinates), telephone, openingHoursSpecification, image, priceRange, vatID, areaServed. See Appendix for complete JSON-LD template.

8.3 Location Pages

MEDIUM Multiple city location pages exist but are outdated

Sitemap reveals location pages for Wemmel, Zaventem, Willebroek, Grimbergen, Bornem, Strombeek, Vilvoorde, Asse, Dendermonde, Brussel. Last updated: February 2022. These pages need content freshness review. Ensure they have 60%+ unique content to avoid thin/doorway page penalties.

8.4 Reviews & Reputation

HIGH No review signals visible on website

No Google Reviews widget, Trustpilot badge, or customer testimonials visible on the site. Reviews are a top-3 local ranking factor. Implement post-purchase review solicitation (email/SMS after delivery). The 18-day rule applies: rankings drop if no new reviews within 3 weeks.

8.5 Google Business Profile

HIGH Verify GBP primary category is "Meubelwinkel"

GBP primary category is the #1 local ranking factor (Whitespark 2026 score: 193). Wrong category is the #1 negative factor. Ensure primary = "Meubelwinkel" (Furniture Store).

HIGH No Google Maps embed detected on contact page

The contact page should have an interactive Google Maps embed with the correct Place ID, plus a prominent "Route plannen" button. This reinforces local signals.

8.6 Belgian Citation Ecosystem

Directory	Priority	Action
Google Business Profile	CRITICAL	Claim/verify, optimize category

Facebook Business	CRITICAL	Verify NAP matches exactly
Gouden Gids (goldenpages.be)	HIGH	Claim listing, verify NAP
Pages d'Or (pagesdor.be)	HIGH	French-language directory, claim
Bing Places	HIGH	Growing with Copilot integration
Apple Business Connect	HIGH	Important for iPhone users
KBO/BCE Register	HIGH	Entity verification (BE0413640662)
Trustpilot	MEDIUM	Growing in Belgium/Netherlands

9. Image Optimization

Image Score

50/100

HIGH Alt text is templated, not descriptive

Product images: "Afbeelding 1/2/3". Blog images: same title repeated for all images. Every image should have unique, descriptive alt text including product name, key attributes, and relevant keywords.

HIGH Only 1 product image per product (sampled)

The Revor36 product has 1 primary image (1920x1920px). Furniture purchases are highly visual - aim for 4-6 images per product showing different angles, room context, and detail shots.

HIGH Blog images served as GIF format

Blog post images are GIF format (1600x830px). GIF is inappropriate for photographic content - use WebP or JPEG for significantly smaller file sizes and better quality.

GOOD Lazy loading implemented

WordPress SVG placeholder lazy loading pattern detected. This helps initial page load performance.

MEDIUM Product images are 1920x1920px

Verify responsive srcset generates appropriate sizes for mobile (400px) and tablet (800px). Serving 1920px images to mobile devices wastes bandwidth significantly.

MEDIUM Missing OG image meta tags on homepage

Social sharing will show generic/no preview images. Add og:image meta tags with branded preview images (1200x630px recommended) for Facebook, LinkedIn, and other social platforms.

10. Internationalization (i18n / Hreflang)

The site uses WPML for bilingual support (Dutch default + French at /fr/). This section evaluates the multilingual implementation quality.

CRITICAL French homepage meta description is in Dutch

The /fr/ homepage has lang="fr-BE" but serves the Dutch meta description: "Meubelen Moens - Ruim aanbod Meubelen Moens..." This means French-speaking users see Dutch text in Google search results, severely impacting CTR. Translate all meta descriptions in WPML String Translation.

HIGH French homepage title partially untranslated

French homepage title: "Meubelen Moens - Meubles Moens" mixes Dutch and French. Should be fully French: "Meubles Moens | Magasin de Meubles Londerzeel - Canapes, Lits & Armoires"

MEDIUM URL structure differences between languages

Dutch: /product/revor36/ vs French: /fr/produit/revor36-fr_be/. The -fr_be suffix adds unnecessary characters. Consider simplifying French product slugs.

GOOD Hreflang tags present on product pages

Product pages properly declare hreflang alternates (nl <-> fr). Verify this is consistent across all page types including categories, blog posts, and informational pages.

MEDIUM Blog sitemap mixes both languages

43 blog posts include both NL and FR versions in the same sitemap. For cleaner crawl signals, consider language-specific sitemaps with hreflang annotations.

11. Prioritized Action Plan

CRITICAL - Fix Immediately

#	Action	Impact	Effort
1	Add FurnitureStore schema (LocalBusiness)	Local Pack, Maps	Low
2	Fix homepage title/H1 duplication	CTR, rankings	Low
3	Allow GPTBot + Google-Extended	AI search visibility	Low
4	Fix French meta description (Dutch!)	French user CTR	Low
5	Add Sitemap to robots.txt	Crawl discovery	Low
6	Resolve name: Meubelen Moens vs Moens	Entity confusion	Low
7	Expand top 50 product descriptions	Product rankings	High
8	Expand blog posts to 1,500+ words	Content quality	High

HIGH - Fix Within 1 Week

#	Action	Impact	Effort
9	Add AggregateRating + reviews to products	Rich results, trust	Medium
10	Add category page buying guides (300-500w)	Category rankings	Medium
11	Add author bylines + bio pages to blog	E-E-A-T signals	Low
12	Optimize all image alt text	Image search, a11y	Medium
13	Create dedicated showroom page	Local SEO, Experience	Medium
14	Add Google Maps embed to contact page	Local signals	Low
15	Verify GBP category = Meubelwinkel	Local Pack ranking	Low
16	Claim Belgian citation directories	Local authority	Medium
17	Consolidate 2 GTM containers	Performance / INP	Medium
18	Fix blog GIF images -> WebP/JPEG	Performance, quality	Medium
19	Implement review collection system	Reviews velocity	Medium
20	Fix H1 duplication on blog posts	On-page SEO	Low

MEDIUM - Fix Within 1 Month

#	Action	Impact	Effort
21	Create /llms.txt file	AI discoverability	Low
22	Enhance Organization schema	Knowledge panel	Low
23	Add FAQ sections + schema to categories	AI citation, UX	Medium
24	Create About page (1948 heritage story)	E-E-A-T, authority	Medium
25	Refresh location pages (last: Feb 2022)	Local freshness	Medium

26	Add Product shipping/return schema	Google Shopping	Medium
27	Create service area pages (Antwerpen etc)	Local expansion	Medium
28	Fix non-descriptive blog slugs	URL signals	Low
29	Add OG image meta tags	Social CTR	Low
30	Simplify French URL -fr_be suffixes	URL cleanliness	Low

LOW - Backlog

#	Action	Impact	Effort
31	Enable IndexNow via Rank Math	Bing/Yandex indexing	Low
32	Add 4-6 product images per product	Conversion, image SEO	High
33	Separate bilingual blog sitemaps	Crawl clarity	Low
34	Add social sharing buttons to blog	Distribution	Low
35	Enable blog comments section	User engagement	Low
36	Monthly blog cadence (1,500+ words)	Topical authority	High
37	Add video content (showroom tours)	Experience signals	High
38	Verify security headers (HSTS etc)	Security baseline	Low

12. Appendix: Schema Code Templates

A. FurnitureStore Schema (CRITICAL - Add to homepage + contact page)

```
{
  "@context": "https://schema.org",
  "@type": "FurnitureStore",
  "id": "https://www.moensmeubelen.be/#store",
  "name": "Meubelen Moens",
  "url": "https://www.moensmeubelen.be",
  "telephone": "+3252302898",
  "email": "info@moensmeubelen.be",
  "foundingDate": "1948",
  "vatID": "BE0413640662",
  "priceRange": "$$-$$$ ",
  "currenciesAccepted": "EUR",
  "paymentAccepted": "Cash, Credit Card, Bancontact",
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "Mechelsestraat 183-191",
    "addressLocality": "Londerzeel",
    "postalCode": "1840",
    "addressRegion": "Vlaams-Brabant",
    "addressCountry": "BE"
  },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": "51.00316",
    "longitude": "4.30452"
  },
  "openingHoursSpecification": [
    {
      "@type": "OpeningHoursSpecification",
      "dayOfWeek": ["Monday", "Tuesday", "Wednesday", "Thursday"],
      "opens": "10:00", "closes": "18:00"
    },
    {
      "@type": "OpeningHoursSpecification",
      "dayOfWeek": "Saturday",
      "opens": "10:00", "closes": "18:00"
    },
    {
      "@type": "OpeningHoursSpecification",
      "dayOfWeek": "Sunday",
      "opens": "13:30", "closes": "18:00"
    }
  ],
  "sameAs": [
    "https://www.facebook.com/moensmeubelen",
    "https://www.instagram.com/moensmeubelen"
  ]
}
```

B. Enhanced Product Schema Template

```
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "[Product Name]",
  "description": "[300+ word description]",
  "image": ["[image1.webp]", "[image2.webp]"],
  "sku": "[SKU]",
  "brand": { "@type": "Brand", "name": "[Brand]" },
  "offers": {
    "@type": "Offer",
    "price": "[Price]",
    "priceCurrency": "EUR",
    "availability": "https://schema.org/InStock",

```

```
"itemCondition": "https://schema.org/NewCondition",
"seller": {
  "@type": "Organization",
  "name": "Meubelen Moens"
},
"shippingDetails": {
  "@type": "OfferShippingDetails",
  "shippingDestination": {
    "@type": "DefinedRegion",
    "addressCountry": "BE"
  }
}
},
"aggregateRating": {
  "@type": "AggregateRating",
  "ratingValue": "[X.X]",
  "reviewCount": "[N]"
}
}
```

C. Recommended robots.txt Changes

ADD to robots.txt:

Sitemap: <https://www.moensmeubelen.be/sitemap.xml>

CHANGE: Allow AI search crawlers (keep ai-train=no)

Remove or comment out these Disallow lines:

User-agent: GPTBot <- ALLOW for ChatGPT search

User-agent: Google-Extended <- ALLOW for AI Overviews

User-agent: ClaudeBot <- ALLOW for Claude search

KEEP blocked (training-only crawlers):

User-agent: CCBot

Disallow: /

User-agent: Bytespider

Disallow: /

Report Summary

Meubelen Moens has a solid technical foundation with WordPress/WooCommerce, proper bilingual support via WPML, and existing Product + BreadcrumbList schema. However, the site scores 48/100 due to significant gaps in content depth, AI search readiness, local SEO optimization, and image quality.

The most impactful improvements are low-effort changes: adding FurnitureStore schema, fixing the duplicated homepage title, allowing AI crawlers, fixing the French meta description, and adding the sitemap to robots.txt. These 5 changes alone could improve the score by 10-15 points.

The 1948 heritage, physical showroom, and established local presence are powerful competitive advantages that competitors cannot easily replicate. Investing in content that showcases these strengths (heritage storytelling, showroom experience, expert buying guides) will build sustainable organic authority.

For maximum ROI, prioritize the Critical and High actions in the action plan, which address the largest ranking opportunity gaps with the most achievable effort levels.
